

Knot&or

A Media Appliance

Scale need to be defined :
 this could be the Internet,
 this could be AMPERS,
 this could be KFAI,
 this could be a Listener-Member of KFAI.
 Eventually each person on Our Planet will have one.
 Each Listener-Member has a unique Appliance.
 Each Appliance can become the Terminal Root for another Appliance.

Each Listener's Appliance
 will have a different
 set of curves.

The green curves are changing
 throughout the day
 from quite broad when doing research
 to quite narrow when tired. . .

The GO-TO experts
 at say the University of Minnesota
 would help design the rule based filters.

The Media Appliance is configured
 for different days of the week and
 times of the day.
 Tight business focus M - F.
 Broaden out with Culture filters active
 for Sunday coffee. . .

Using the Listener-Member's
 FaceBook page as a starting point
 for a Profile to generate rules &
 Terminal Roots.

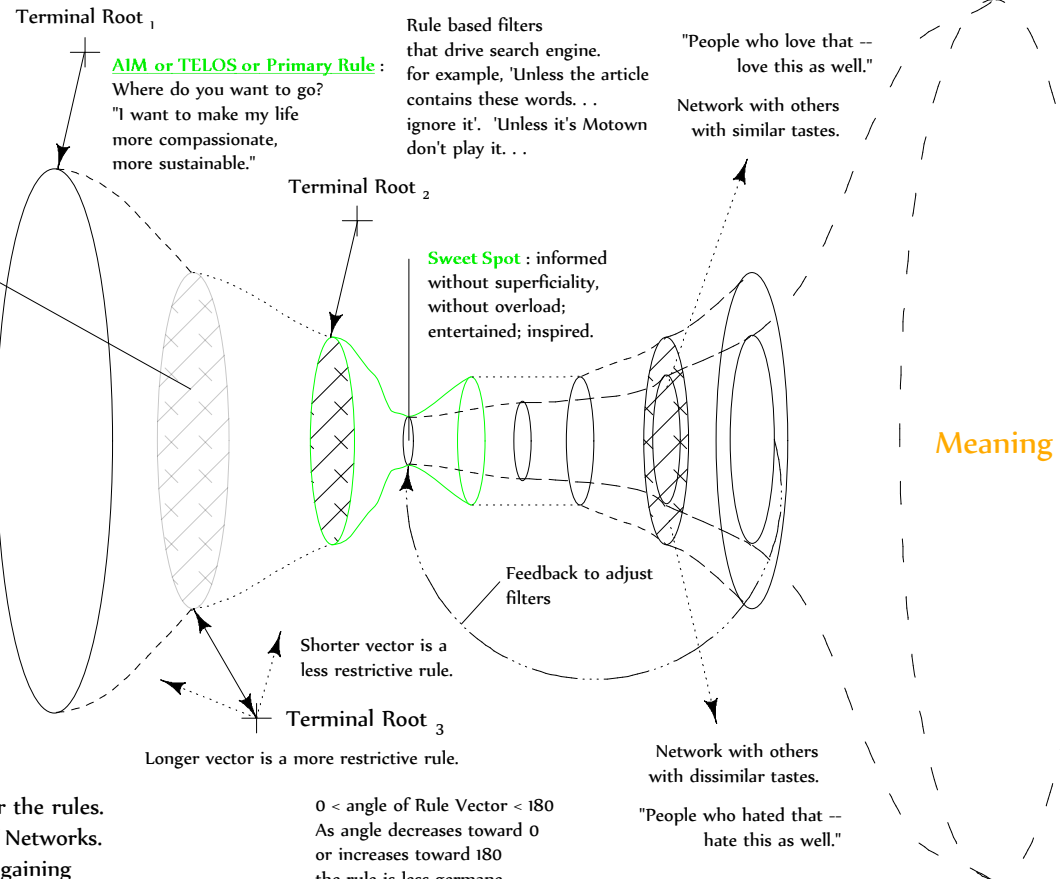

Filters :
 the mesh varies
 periodically.
 A special case is a
 humpback's baleen.

Cyberspace :

Information →

Polyvalent, Polylectical, Polyhedral.
 Potentially dangerous if you're
 ignorant or foolhardy. . .
 The vastness of it is almost
 perceived of as noise. . .

How diverse is Your Cyber-eco system?

The Terminal Roots are the origins for the rules.
 They could be specific articulations of Networks.
 I get dizzy when I think the roots are gaining
 nourishment from millions of other People's Appliances.
 I get more dizzy when I think of each Appliance as
 one point on one line of a larger Filter's mesh. . .

Feedback :
 Periodically the Appliance
 interviews the User.
 "How we doin?"
 Default is once a month.

Feedback : Random missiles to control
 Echo Chamber Effect.
 Set from 0 to 100. 100 would
 have maximal Echo Chamber
 effect, that is, nothing random;
 maximal narcissism; maximal timidity.

A giving back. Sharing.
 Teaching. Inspiring.
 Filling with enthusiasm.
 I have added energy to the
 system. The output
 vector is greater than the input.
